Hello Junior.

I'm Hassan Said Hamad from Tanzania, and I am one of your students. I was doing a practice about spring boot security with JWT based on spring boot 3 that is released recently, but I am in place that I cannot even understand what the problem, basically I created one end-point of registering new users and it works perfectly and other one is login into the system, when I login into the system I got unauthorized request as a result while login api mapping I set as public, so I need your help junior on it.

Thanks so much.

By Hassan Said Hamad, your student from tanzania.
